

# NestFind PRD (2026-01-16)

---

## Part 1: Basic Information

### Title

NestFind

### Terminology

| Term      | Definition                                                       |
|-----------|------------------------------------------------------------------|
| Listing   | A property available for rent on the platform                    |
| Inquiry   | A message sent by a renter expressing interest in a property     |
| Favorites | Properties saved by a renter for later viewing                   |
| Amenities | Features included with the property (parking, laundry, AC, etc.) |
| Sqft      | Square footage - the total floor area of the property            |

### Project Information

#### Description

NestFind is a streamlined rental property listing platform that connects renters with available properties. The platform focuses exclusively on rentals, providing a clean and efficient browsing experience with an admin dashboard for property management.

#### Goals

1. Enable renters to quickly discover and browse rental properties with intuitive search and filtering
2. Provide a simple inquiry system for renters to contact property managers
3. Allow administrators to efficiently manage property listings and respond to inquiries

#### User Types

- **Renter:** Can browse property listings, view property details, save favorites, contact agents via inquiry form
- **Admin:** Full system access, manage property listings (CRUD), manage user accounts, view and respond to inquiries

#### User Relationships

- Renter to Properties: 1:N (One renter can save multiple favorite properties)
- Admin to Properties: 1:N (Admin manages all property listings)
- Renter to Inquiries: 1:N (One renter can submit multiple inquiries)

#### Project Type

- Web Application - React
- Admin Dashboard - React

## System Modules (Step-by-step Flows)

### Module 1 - Property Search

1. Renter enters location or uses current location
2. System displays matching property listings as cards
3. Renter applies filters (price, bedrooms, property type)
4. System updates results in real-time
5. Renter clicks on a property card to view details

### Module 2 - Property Detail View

1. Renter clicks on property listing
2. System displays full property page with photo gallery, amenities, description, and location map
3. Renter can add property to favorites or submit inquiry
4. System confirms action with success message

### Module 3 - Submit Inquiry

1. Renter clicks "Contact" button on property detail page
2. System shows inquiry form (name, email, phone, message)
3. Renter fills out form and submits
4. System sends confirmation to renter and notification to admin
5. Inquiry appears in admin dashboard

### Module 4 - Admin Property Management

1. Admin logs into dashboard
2. Admin views list of all properties
3. Admin can add new property with details and photos
4. Admin can edit existing property information
5. Admin can delete (archive) property listing

## 3rd Party API List

- Google Maps: Display property locations on map
- 

## Part 2: User Application PRD

### User Types: Renter

Renters are the primary users of the web application. They can browse, search, and save properties without authentication, but must be logged in to submit inquiries.

### 1. Common

#### Splash Page

- Design: Simple logo animation on Ocean Blue (#0066CC) background
- Duration: 1-2 seconds before redirecting to Home

#### Login Page

- Input:

- Email
- Password
- **Next Action:**
  - Validate email format
  - Validate password not empty
  - On error: Display "Invalid email or password"
  - On success: Redirect to previous page or Home

## Forgot Password Page

- **Main**
  - Input: Email address
  - Action: Send password reset link
- **Reset Password Page**
  - Input: New password, Confirm password
  - Validation: Passwords must match, minimum 8 characters

## Sign Up Page

- **Input:**
  - Email (required)
  - Password (required)
  - Full Name (required)
  - Phone Number (optional)
- **Rules:**
  - Email must be valid format and unique
  - Password minimum 8 characters
  - Full Name minimum 2 characters

## 2. Renter

### 2.1 Navigation Menu

1. Home (Search)
2. Favorites
3. My Inquiries
4. Profile

### 2.2 Page Architecture & Feature Specification

#### 1. Home Tab

##### Main Page (Property Search)

1. Search Bar
  - Location input with autocomplete
  - Search button
2. Filter Section
  - Price range slider (min-max)
  - Bedrooms dropdown (Studio, 1, 2, 3, 4+)
  - Property type dropdown (Apartment, House, Condo, Townhouse)

- Apply filters button

### 3. Property Listing Grid

- Property cards displayed in responsive grid
- Each card shows:
  - Main photo
  - Price per month
  - Address
  - Bedrooms / Bathrooms
  - Sqft
  - Heart icon (add to favorites)

### 4. Map View Toggle

- Switch between grid view and map view
- Map shows property markers
- Click marker to see property preview

## Property Detail Page

- Photo gallery (swipeable, up to 10 photos)
- Property title and address
- Price per month
- Property details:
  - Bedrooms
  - Bathrooms
  - Square footage
  - Property type
- Amenities list with icons
- Description text
- Location map (Google Maps embed)
- Contact button → Opens inquiry form
- Add to favorites button

## Inquiry Form Modal

- Pre-filled: Renter name, email (if logged in)
- Input fields:
  - Name (required)
  - Email (required)
  - Phone (optional)
  - Message (required)
- Submit button
- Success confirmation message

## 2. Favorites Tab

### Main Page

#### 1. Favorites List

- Grid of saved property cards
- Same card format as Home page

- Remove from favorites button on each card

## 2. Empty State

- Message: "No saved properties yet"
- Link to browse properties

## 3. My Inquiries Tab

### Main Page

#### 1. Inquiries List

- List of submitted inquiries
- Each item shows:
  - Property photo thumbnail
  - Property address
  - Date submitted
  - Status indicator (Sent, Viewed, Responded)

#### 2. Inquiry Detail

- Property info
- Original message sent
- Response from admin (if any)

#### 3. Empty State

- Message: "No inquiries yet"
- Link to browse properties

## 4. Profile Tab

### Main Page

#### 1. Profile Info

- Name
- Email
- Phone number
- Edit profile button

#### 2. Account Actions

- Change password
- Logout button

### Edit Profile Page

- Full Name input
- Phone number input
- Save button
- Cancel button

---

## Part 3: Admin Dashboard PRD

# Admin Dashboard Standard Features

All admin dashboard pages should include the following standard features unless otherwise specified.

## List Page Standard Features

| Feature            | Description                                              | Required |
|--------------------|----------------------------------------------------------|----------|
| Search             | Keyword search field (name, ID, email, etc.)             | Yes      |
| Filters            | Status / Date / Category dropdown filters                | Yes      |
| Column Sorting     | Click table header to sort ASC/DESC                      | Yes      |
| Checkbox Selection | Row checkboxes + Select All checkbox                     | Yes      |
| Bulk Actions       | Bulk delete / Status change / Export for selected items  | Yes      |
| Pagination         | Page navigation + Items per page selector (10/25/50/100) | Yes      |

## Table UI Standard Features

| Feature       | Description                                 | Required |
|---------------|---------------------------------------------|----------|
| Loading State | Skeleton or spinner while data loads        | Yes      |
| Empty State   | Message displayed when no data exists       | Yes      |
| Action Column | Edit / Delete / View Detail buttons per row | Yes      |

## Detail/Edit Standard Features

| Feature             | Description                            | Required |
|---------------------|----------------------------------------|----------|
| Detail Drawer/Modal | Click row to open detail panel         | Yes      |
| Edit Form           | Switch to edit mode within detail view | Yes      |
| Delete Confirmation | Confirmation dialog before deletion    | Yes      |
| Audit Log           | Track who/when/what was modified       | Optional |

## Data Export Standard Features

| Feature              | Description                              | Required |
|----------------------|------------------------------------------|----------|
| CSV/Excel Download   | Export current filtered/searched results | Yes      |
| Date Range Selection | Period filter for export                 | Yes      |

## Common UI/UX Standard Features

| Feature             | Description                     | Required |
|---------------------|---------------------------------|----------|
| Toast Notifications | Success/Error feedback messages | Yes      |

|                            |                             |     |
|----------------------------|-----------------------------|-----|
| <b>Breadcrumb</b>          | Current location navigation | Yes |
| <b>Create Modal/Drawer</b> | Form for adding new items   | Yes |

---

# Page Architecture & Feature Specification

## Dashboard Home Page

### Statistics Cards

- Total Listings (Active / Inactive)
- Total Renters
- Total Inquiries (This month)
- Pending Inquiries (Unresponded)
- Show increase/decrease percentage compared to previous period

### Period Filter

- Today / Last 7 days / Last 30 days / Custom date range

### Charts

- New inquiries trend (line chart - last 30 days)
- Listings by property type (pie chart)

### Recent Activity

- Recently added listings (last 5)
  - Recent inquiries (last 5)
- 

# User Management

## Renter Management Page

### Main Page

1. Top Area:
  - Search: Keyword search - name, email
  - Filters: Status (Active/Inactive), Registration date range
  - Create button → Creation Modal
  - Bulk Action dropdown: Delete / Activate / Deactivate / Export
2. Table Component:
  - Checkbox column (with Select All)
  - Name
  - Email
  - Phone
  - Favorites count
  - Inquiries count
  - Status
  - Created at
  - Last login

- Action column: View / Edit / Delete

### 3. Table Features:

- Column sorting (click header)
- Pagination with items per page selector

## Creation Modal

- Full Name (required)
- Email (required)
- Phone (optional)
- Temporary Password (auto-generated or manual)
- Create button / Cancel button

## Detail Drawer

- Header Info: Name, email, phone, avatar
  - Account Actions:
    - Activate / Deactivate account
    - Reset password (issue temporary password)
  - Activity Summary:
    - Favorites count (link to view)
    - Inquiries count (link to view)
  - Timestamps: Created at / Last login / Last modified
- 

# Feature Management

## Property Listings Management Page

### Main Page

1. Top Area:
  - Search: Address, title, ID
  - Filters: Status (Active/Inactive), Property type, Price range
  - Create button → Creation Modal
  - Bulk Action dropdown: Delete / Activate / Deactivate / Export
2. Table Component:
  - Checkbox column (with Select All)
  - Photo thumbnail
  - Title
  - Address
  - Property type
  - Price
  - Bedrooms
  - Bathrooms
  - Status
  - Created at
  - Inquiries count
  - Action column: View / Edit / Delete

### 3. Table Features:

- Column sorting (click header)
- Pagination with items per page selector

### Creation Modal / Edit Form

- Title (required)
- Address (required)
- Property type dropdown (required)
- Price per month (required)
- Bedrooms (required)
- Bathrooms (required)
- Square footage (required)
- Description (required)
- Amenities multi-select (Parking, Laundry, AC, Heating, Dishwasher, Pet-friendly, etc.)
- Photo upload (up to 10 photos)
- Status toggle (Active/Inactive)
- Create/Save button / Cancel button

### Detail Drawer

- Photo gallery preview
- All property details
- Map preview
- Edit mode toggle
- Delete with confirmation
- Inquiry list for this property

## Inquiries Management Page

### Main Page

#### 1. Top Area:

- Search: Renter name, email, property address
- Filters: Status (Pending/Responded), Date range
- Bulk Action dropdown: Mark as Responded / Delete / Export

#### 2. Table Component:

- Checkbox column (with Select All)
- Renter name
- Renter email
- Property (link)
- Message preview (truncated)
- Status
- Created at
- Responded at
- Action column: View / Respond / Delete

#### 3. Table Features:

- Column sorting (click header)
- Pagination with items per page selector

**Detail Drawer**

- Renter info: Name, email, phone
  - Property info: Title, address, photo
  - Full message text
  - Response section:
    - Response textarea
    - Send response button
    - Response history (if multiple)
  - Status: Pending / Responded
  - Timestamps
- 

**Export / Data Download**

**Data Download**

- Property Listings Export (CSV)
    - All fields included
    - Filter by status, date range, property type
  - Inquiries Export (CSV)
    - Renter info, property info, message, status, dates
    - Filter by status, date range
  - Renters Export (CSV)
    - User info, activity stats
    - Filter by status, date range
- 

**Additional Questions (Client Confirmation Required)**

**Required Clarifications**

| # | Question                                                                                    | Context                                                                                    |
|---|---------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| 1 | Should renters be able to browse properties without logging in?                             | Need to clarify if authentication is required for browsing or only for inquiries/favorites |
| 2 | What happens when a property is deleted - should existing inquiries be archived or deleted? | Data retention policy needed                                                               |
| 3 | Should there be email notifications for new inquiries to admin?                             | Communication workflow clarification                                                       |

**Recommended Clarifications**

| # | Question                                                                        | Context                                              |
|---|---------------------------------------------------------------------------------|------------------------------------------------------|
| 1 | Should the property search support location autocomplete via Google Places API? | Would enhance UX but requires additional integration |

|   |                                                                        |                                                           |
|---|------------------------------------------------------------------------|-----------------------------------------------------------|
| 2 | What are the exact amenity options to display?                         | Need definitive list for consistent data entry            |
| 3 | Should there be a property comparison feature?                         | Common in real estate apps, could enhance user experience |
| 4 | Is there a specific image size/format requirement for property photos? | Affects storage and display quality                       |

## Feature Change Log

### Version 1.0 (2026-01-16)

| Change Type | Before | After            | Source                    |
|-------------|--------|------------------|---------------------------|
| Initial     | -      | Full PRD created | NestFind_260116_165207.md |

#### Change Details

##### Initial PRD Creation

- **Source Document:** NestFind\_260116\_165207.md (Training file)
- **Change Description:** Initial PRD created from training project requirements

## UX Flow Improvement Suggestions

UX flow issues identified during PRD creation:

### Suggestions

| # | Current Flow                    | Issue                                                      | Suggestion                                                                 | Priority |
|---|---------------------------------|------------------------------------------------------------|----------------------------------------------------------------------------|----------|
| 1 | Favorites requires login        | Users cannot save favorites while browsing without account | Allow guest favorites with local storage, prompt to create account to sync | Medium   |
| 2 | Inquiry form is modal only      | Users must navigate to property detail to inquire          | Add quick inquiry button on property cards in list view                    | Low      |
| 3 | No recent searches              | Users must re-enter search criteria each visit             | Add recent searches/saved searches feature                                 | Low      |
| 4 | Single entry to inquiry history | My Inquiries only accessible from nav menu                 | Add "View your inquiries" link in inquiry confirmation message             | Medium   |

#### Suggestion Details

##### Suggestion 1: Guest Favorites with Local Storage

- **Current:** Users must log in to save favorites

- **Issue:** Creates friction for new users who want to browse and save before committing to account creation
- **Suggestion:** Store favorites in browser local storage for guests, then prompt to create account to sync across devices
- **Expected Benefit:** Lower barrier to engagement, higher conversion to registered users

#### **Suggestion 2: Quick Inquiry from List View**

- **Current:** Must click into property detail page to submit inquiry
- **Issue:** Extra navigation step for users who know they want to inquire
- **Suggestion:** Add a small "Contact" icon on property cards that opens inquiry modal directly
- **Expected Benefit:** Faster path to conversion for decisive users

#### **Suggestion 3: Recent/Saved Searches**

- **Current:** Search criteria is not persisted
- **Issue:** Returning users must re-enter location and filters each session
- **Suggestion:** Save last 5 searches in local storage, display as quick-access chips
- **Expected Benefit:** Improved returning user experience, faster time to browse

#### **Suggestion 4: Post-Inquiry Navigation**

- **Current:** After submitting inquiry, user sees success message only
- **Issue:** No clear path to view submitted inquiries or continue browsing
- **Suggestion:** Success message includes "View your inquiries" and "Continue browsing" links
- **Expected Benefit:** Better post-action guidance, reduced user confusion
